

**QUEENS' SCHOOL**  
*Dare to enjoy Social Sciences*

Year 10 and 12 Psychology students were treated to an exciting Brain day workshop delivered by Dr Guy Sutton. The students were giving a fascinated insight into the working brain, as well as the effects of sleep and trauma on the brain. The highlight of the workshop was when students were able to take part in a sheep brain dissection. Students were able to see the different lobes in the sheep's brain, as well as dissect important structural parts of the brain including the hippocampus!
