Here are some of the top tips for ensuring that students make the best progress when working independently at home which we share with them:

1. Create a Home Learning Plan

- Check Class Charts every day to see what work is set and when it is due. They should ask questions well before the due date if they are unclear on the instructions.
- It's normal for students to have a few hours of home learning a night. If it's heavy home learning day, they will need to devote more time to it.
- Try to come up with a home learning schedule, especially if a student is involved in extracurriculars.

2. Find a Good Place to Work

When students settle down to do home learning, where do they do it? Parked in front of the TV? In the kitchen, with other family members distracting? Maybe these places worked when they were younger and home learning was simpler, but home learning is probably more complicated now.

Students will do best if they can find a place to get away from distractions, like a bedroom or study. If their home is noisy no matter where they go, they could try searching online for study music, anything relaxing or inspiring. This can help drown out noise in their environment — being mindful of the volume of course!

They should sit at a desk or table that's comfortable, or try spreading out on the floor. It's usually best for them to avoid their beds because they might get sleepy or have trouble sleeping later on. As long as they find a spot where they feel comfortable (and not tired), they'll be able to focus.

3. Get to Work

If students start working while they feel stressed out, anxious, or otherwise in a bad mood, they may not get much done. They could try practising a mindfulness or breathing exercise before getting started, even just for a few minutes in order to improve focus.

Avoid distractions. Students should put away their phones and other electronic distractions when starting home learning. They should turn off apps on their devices so they're only focused on academic work. Some people like to start with the easy assignments to get them out of the way, while others prefer to tackle the more challenging assignments first. They should consider which strategy will work better for them by trying both and seeing if they notice a difference. If they get stuck, they should try to figure out the problem, without spending too much time on it because they need time for other assignments. Taking a 15-minute break every hour is a good idea for most people.

4. Get Help When They Need It

Even when students pay attention in class, study for tests, and do your home learning, some subjects may still seem too hard. We advise them not to be afraid to ask for home learning help — from teachers, friends, or family members.
